

How does the L3AI platform actually work?

A customer-ready product book for understanding the real public experience, product modules, journey status and roadmap boundaries.

Product answer

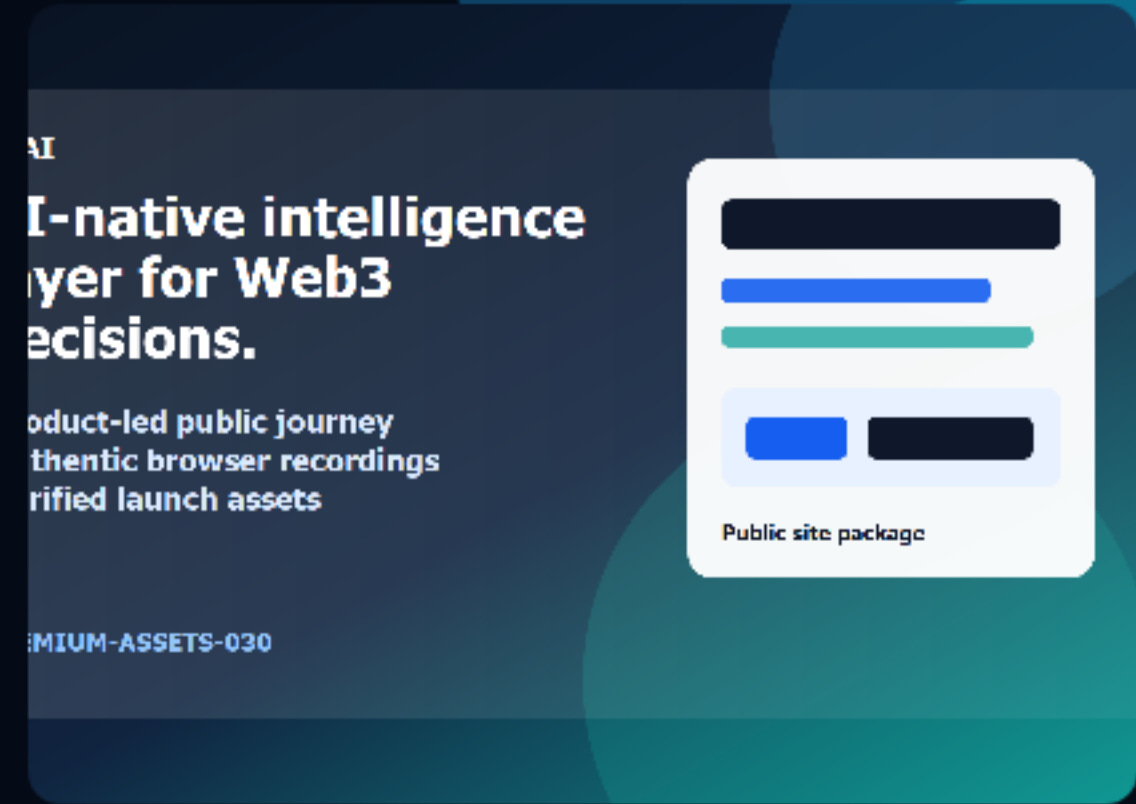

Use this book after the Story Book when the customer asks what the platform does.

What problem does the product solve on day one?

L3AI gives users one guided place to understand Web3 context, product pages, wallet-aware education and approved public resources.

Product answer

The product job is to make the first review path clear.

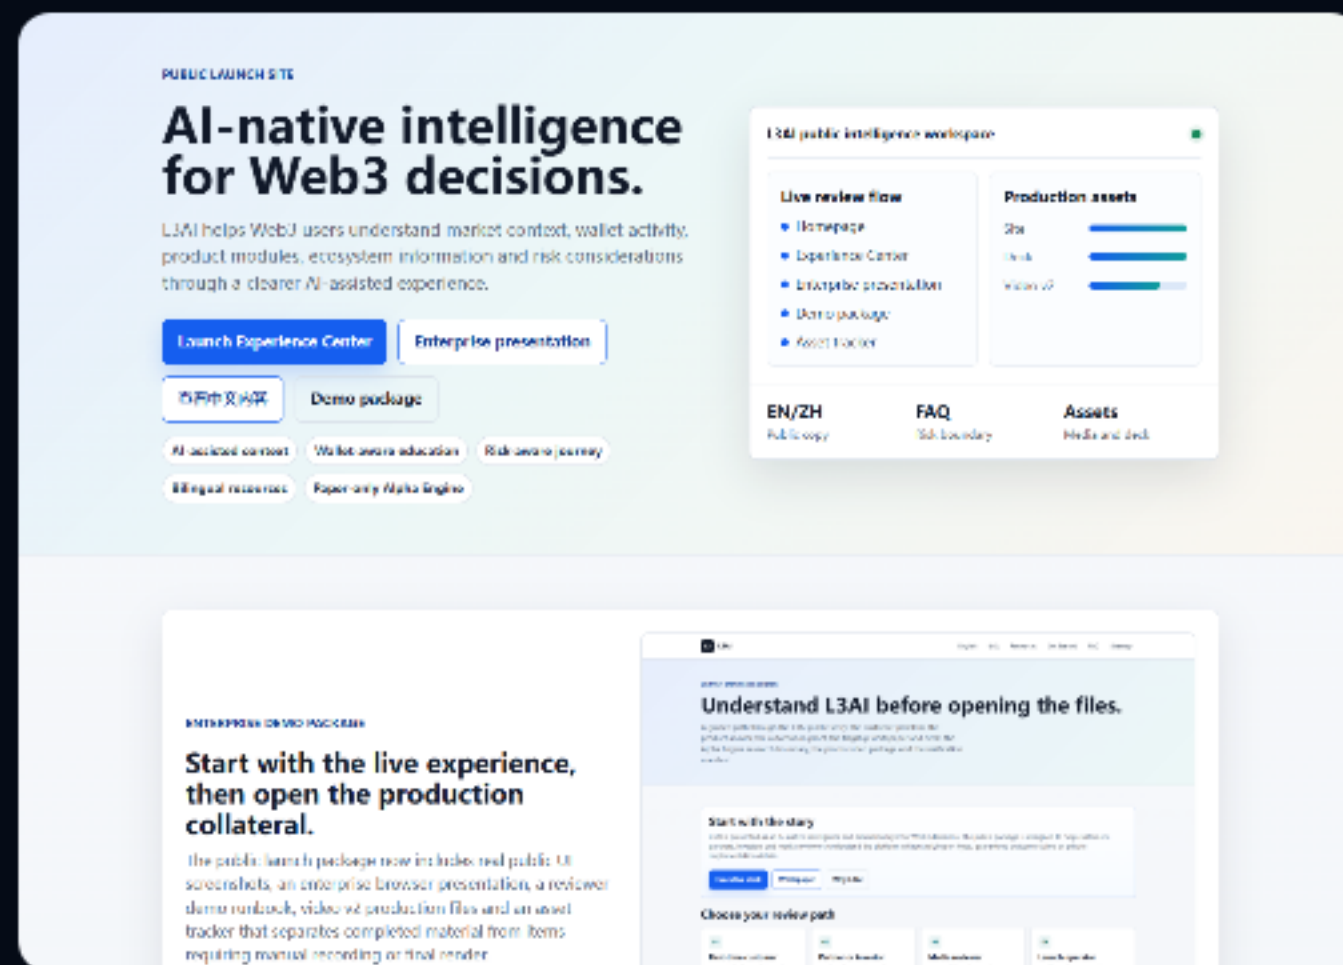

Where does a new visitor start?

Current: the public homepage introduces the product promise, routes visitors to Story, Overview, AI Quant, Wallet, Trust and Resources, and keeps the first action educational.

Product answer

The first screen gives orientation before any deeper material.

How does registration fit into the journey?

Current: public get-started and contact routes handle interest and partner review. In Progress: authenticated onboarding can connect identity, membership and product access. Planned: deeper account-state guidance.

Product answer

Registration is treated as an onboarding step, not a pressure point.

START HERE

Choose your L3AI path.

The current public launch package supports visitor education, media review, partner review, investor review and package verification. Select the route that matches what you need.

Visitors

Start with the public website copy and product positioning. The current material focuses on AI-assisted content, wallet-aware education and risk-aware participation.

[Read English](#)

[日本語](#)

[Read FAQ](#)

Investors

Review the public investor deck, narrative PDFs and bilingual overview content. The public site does not add performance promises or investment outcome claims.

[Open investor deck](#)

[Open website PDFs](#)

[Review risk and advice boundary](#)

Media

Use the public media kit, press kit, FAQ and image assets that are already present in the launch export.

[Open media and press resources](#)

[Open press kit PDFs](#)

[Open public image and narrative](#)

[Review media language guidelines](#)

Partners

Review product positioning, public copy, FAQ language and launch resources before requesting any non-public material through approved channels.

[Review English website copy](#)

[Review public messaging assets](#)

[Review public FAQ](#)

Launch Operators

Use the manifest and shemaps to verify public package completeness and disclose the chain-of-custody structure.

[Public asset manifest](#)

[Human shemap](#)

[XGL shemap](#)

Contact and Feedback

A formal public business or support contact channel is not present in the current export, but public material review, use the public repository reference until an approved contact name publishes the official channel.

[Open public repository](#)

What is the core user flow?

Discover the platform, review product context, explore AI Quant, understand wallet states, open resources and return through community or contact paths.

Return

Product answer

A user can follow the same loop without needing private system access.

What modules make up the platform?

The product map connects AI Quant, Wallet context, Compute, Membership, Community learning, Automation and a roadmap layer for future Universe experiences.

AI Quant

Compute

Wallet

Product answer

L3AI is easier to evaluate when the modules are shown as one system.

Core product modules

What does AI Quant do for the customer?

Current: AI Quant presents market and product context as explainable review material. It avoids outcome promises and helps the user ask better questions before deciding what to explore.

Product answer

AI Quant is an explanation layer, not a guarantee layer.

PRODUCT MODULES

What this page helps the visitor understand.

Input

Public market themes, protocol context, product documentation and launch materials.

Model role

Explain, compare, summarize and structure rather than guarantee performance.

Reviewer controls

Risk notes, scenario language, public FAQ and unsupported claim filters.

Output

Educational context that can hand off to product pages, whitepaper or deck.

WALKTHROUGH

From first context to next step.

01 Collect public context

Gather public facing information only.

02 Structure signals

Separate observation, assumption, scenario and uncertainty.

03 Review boundary

Remove advice, guaranteed outcome and live execution language.

04 Hand off

Route visitors to business model, roadmap or contact when appropriate.

How does a user read an AI Quant screen?

The experience frames what the user is seeing, why it may matter, and which next page or resource can help them understand the context.

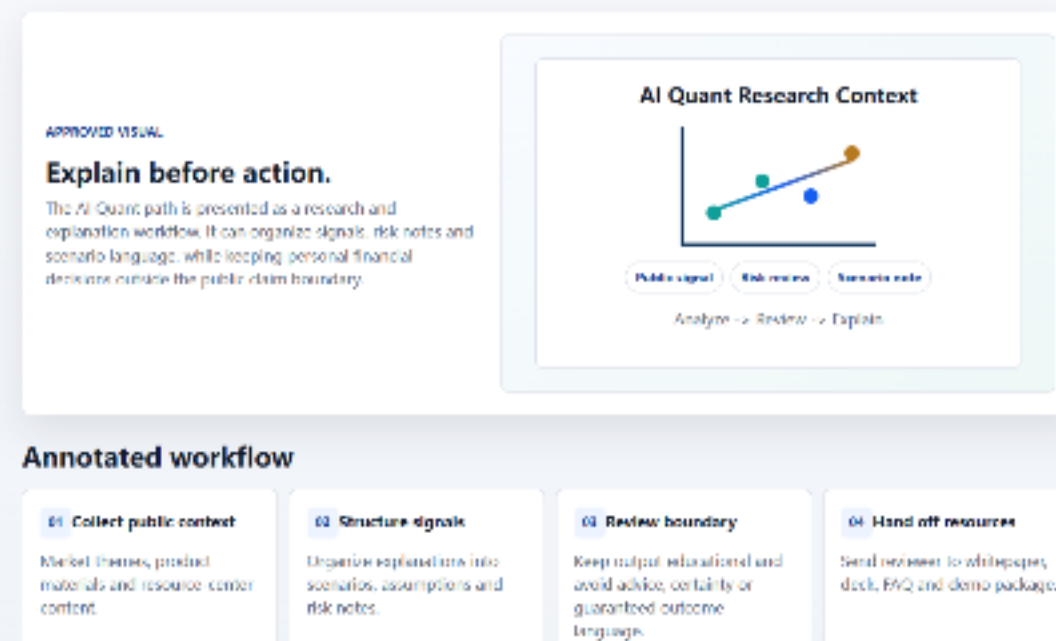

Product answer

The screen is useful because it explains the situation before action.

PRODUCT DEMO

AI Quant Workflow.

A public, safe walkthrough of how L3AI explains quant style research as structured context, not as a promise of financial performance or automated trading.

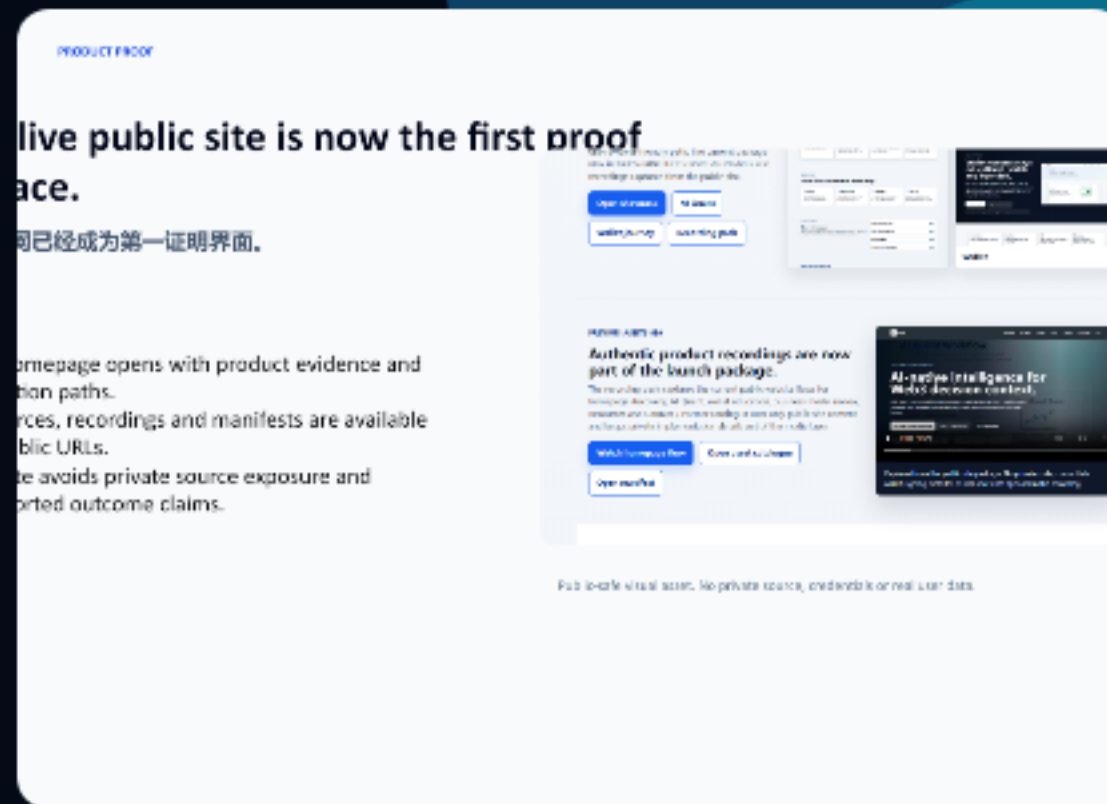

What stays outside the AI Quant claim boundary?

L3AI does not present guaranteed returns, asset-price predictions, exchange listing claims, or funding instructions in public product materials.

Product answer

The boundary is visible because trust is part of the product.

Core product modules

How does wallet-aware education work?

Current: Wallet pages show high-level state awareness and education. They do not expose signing material, private keys, real accounts or production wallet data.

Product answer

The wallet experience explains state without exposing private material.

PRODUCT MODULES

What this page helps the visitor understand.

Intent first

Start from the user goal instead of forcing a technical wallet action.

Context view

Explain product state in plain language before sensitive decisions.

Checkpoints

Make risk reminders and confirmation moments visible.

Record layer

Describe auditability at a high level without exposing raw account data.

WALKTHROUGH

From first context to next step.

01 Understand intent

Clarify what the visitor is trying to do.

02 Show context

Present wallet aware state as product education.

03 Review risk

Keep confirmation and boundary notes visible.

04 Preserve records

Explain auditability without exposing private implementation details.

What should a user understand before a wallet moment?

A wallet-aware journey should tell the user where they are, what a state means, what remains review-only and where to find the trust boundary.

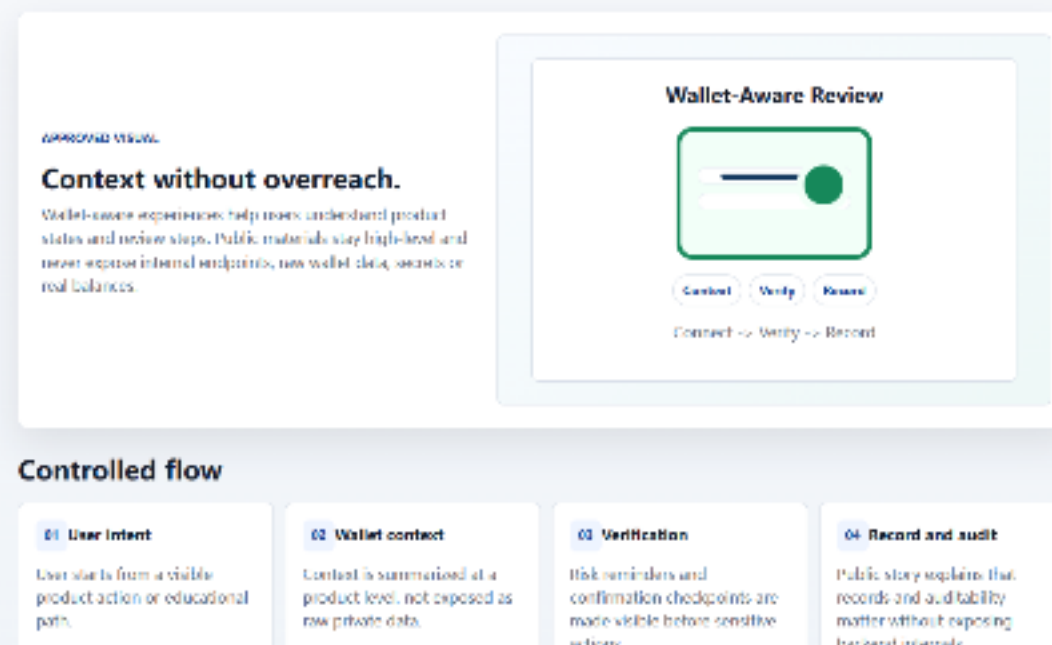

Product answer

The product slows down the wallet moment so the user can understand it.

PRODUCT DEMO

Wallet-aware journey.

A controlled public explanation of wallet-aware experiences: context, verification, records and risk checkpoints without exposing real private wallet data.

business story

The platform journey starts with product resources.

The public site gives reviewers a route before asking them to

Start at the product surface

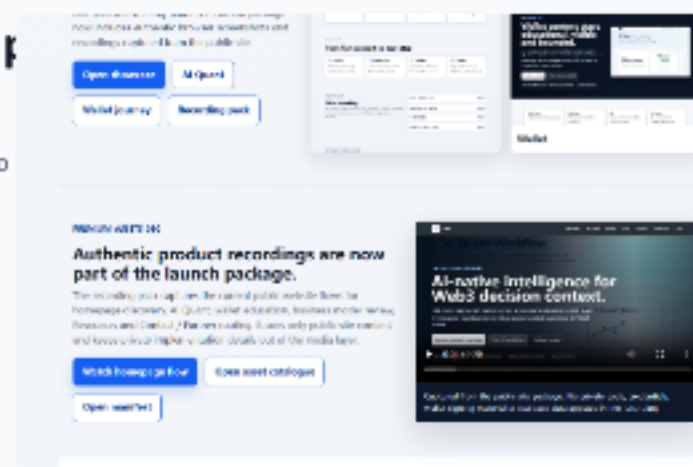

Visitors see the live homepage, product proof and audience paths.

Move into product modules

AI Quant, wallet-aware education, trust and roadmap pages explain the offer.

Open resources only after context

Deck, whitepaper, video and media kit support the story instead of replacing it.

Current

Public screenshot used from the live asset package.

Product Business Deck

Core product modules

Where does Compute fit?

In Progress: Compute is the work layer for structured AI tasks, automation workflows and future product operations. It is described as platform capability, not a public promise of live capacity.

Product answer

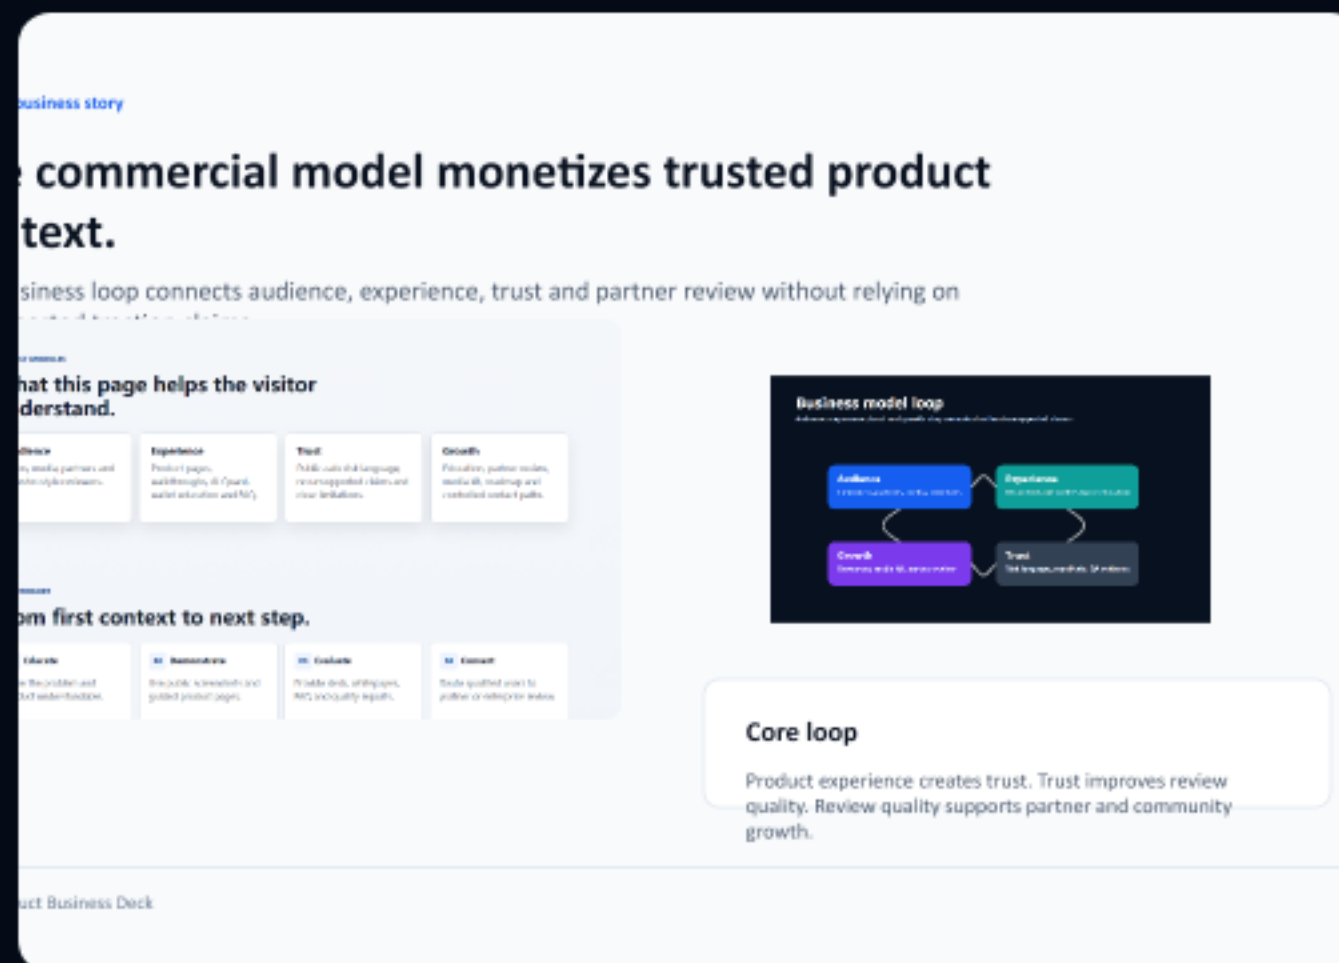

Compute gives the product system a way to organize work over time.

What automation can the platform support?

In Progress: automation can connect content, alerts, learning flows, AI review and release operations. Planned: broader campaign and product-workflow automation after governance gates.

Product answer

Automation should reduce confusion while keeping review gates visible.

business story

Video and media now follow the product story.

Next promo narrative should move from product problem to user journey, and review CTA.

Open with the user problem

Confusing signals and weak trust slow Web3 decisions.

Show the product path

Homepage, AI Quant, wallet education, resources and partner handoff.

Close with a review action

Use the deck, whitepaper, demo and contact path for controlled external review.

Rewritten narrative included

Product Business Deck

Status and roadmap

How does membership change the product experience?

In Progress: membership can connect user state, learning progress, access levels, community participation and future product surfaces into one repeatable relationship.

Product answer

Membership gives the product memory without overstating what is live.

What role does the community play?

Current: public FAQ and resources explain the product language. Planned community layers can support moderated learning, official updates and safer product education.

Product answer

Community should teach before it amplifies.

PUBLIC FAQ

L3AI frequently asked questions.

Bilingual answers using the approved public website and press kit language already present in the current launch package.

English

What category does L3AI belong to?

L3AI belongs to the AI-native Web3 financial intelligence category.

What problem does L3AI address?

L3AI helps users make sense of fragmented Web3 information across market context, wallet activity, product modules, ecosystem context and risk signals.

Does L3AI provide financial advice?

No. L3AI provides product information, education, AI-assisted context and risk-aware experiences. It does not provide personalized investment advice or guarantee outcomes.

What does AI do inside L3AI?

AI helps organize information, summarize context, explain product concepts and reduce information overload. Users remain responsible for reviewing information and making their own decisions.

简体中文

L3AI 属于什么品类?

L3AI 属于 AI 原生 Web3 金融智能品类。

L3AI 解决什么问题?

L3AI 帮助用户理解分散在区块链市场、钱包活动、产品模块、生态背景和风险信号中的 Web3 信息。

L3AI 提供金融建议吗?

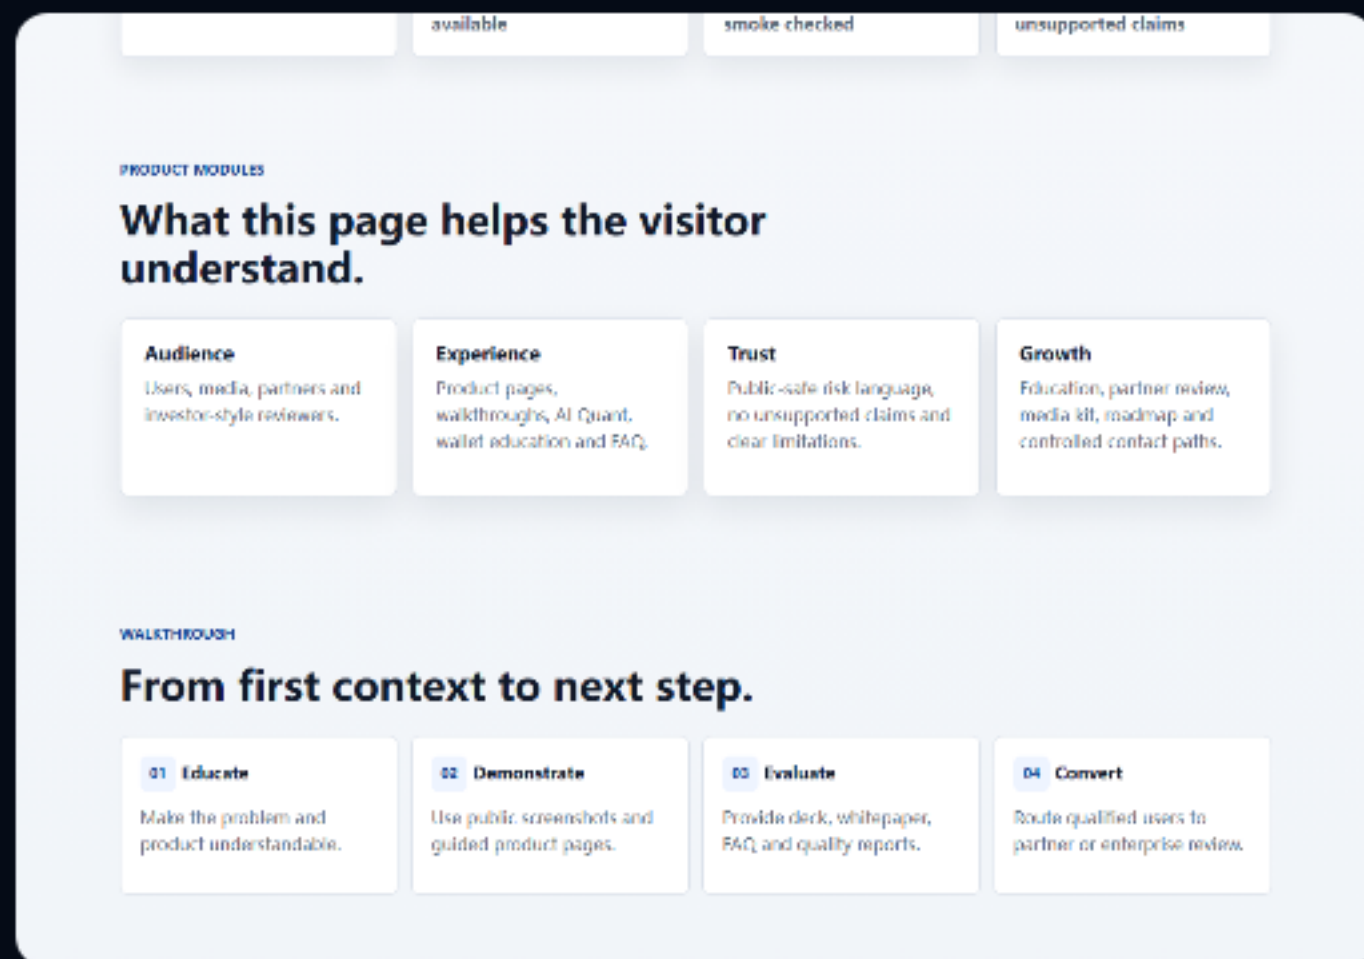

不提供。L3AI 提供产品信息、教育内容、AI 辅助推荐和相关风险提示体验。它不提供个性化投资建议，也不保证结果。

L3AI 中的 AI 起什么作用?

AI 用于整理信息、总结语境、解释产品概念并减少信息过载。用户仍需自行审查信息并做出自己的决策。

Alpha Engine 是真实交易系统吗?

不是。虽然 Alpha Engine 公开披露算法的 paper only 的 AI 量化研究模型和策略。不面向真实交易、真实交易等用途。该模型旨在帮助用户理解其策略性能测试结果。

Status and roadmap

How does the business model connect to the product?

The commercial story begins with a clearer product journey: visitors understand value, partners understand fit, and reviewers can inspect public-safe evidence before engagement.

Product answer

A better product path makes business conversations cleaner.

How does a customer move from interest to review?

Read the Story Book, open Product Overview, inspect AI Quant and Wallet pages, verify Resources and choose Contact only when intent is clear.

Product answer

The conversion path is review-led, not pressure-led.

Status and roadmap

What is Current today?

Current: public product site, Product Overview, AI Quant page, Wallet page, Trust page, Resources hub, public screenshots, downloadable decks, PDF/PPTX/HTML previews and manifests.

Product answer

Current means the user can open it now on the public site.

What is In Progress?

In Progress: creative polish, deeper product recordings, authenticated onboarding design, membership progression, compute workflows, localized campaigns and improved motion assets.

Product answer

In Progress means it is being shaped, not promised as live.

SOLUTION

It turns fragmented Web3 context into a guided product journey.

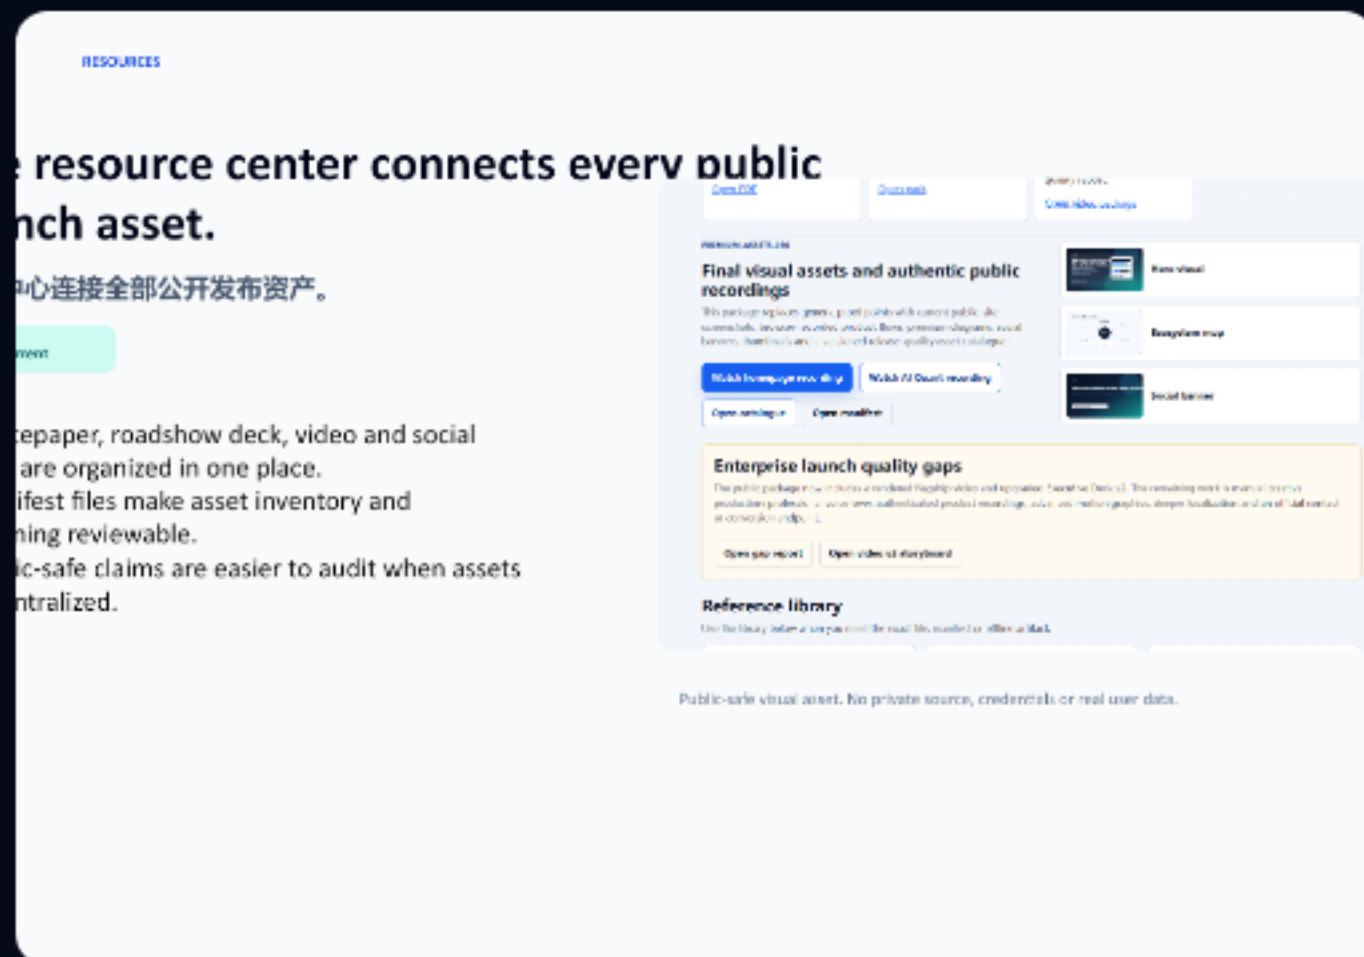

碎片化语境组织成清晰产品路径。

Consistent explanation supports clarity, not complexity.

Context-aware education helps users understand product and activity without exposing private data. Curated resources keep the deck, whitepaper, and proof assets connected to the live site.

Public-safe visual asset. No private source, credentials or real user data.

Status and roadmap

What is Planned?

Planned: broader Universe experiences, advanced automation, partner kits, community learning expansion, more distribution channels and future account-state journeys after approval gates.

Product answer

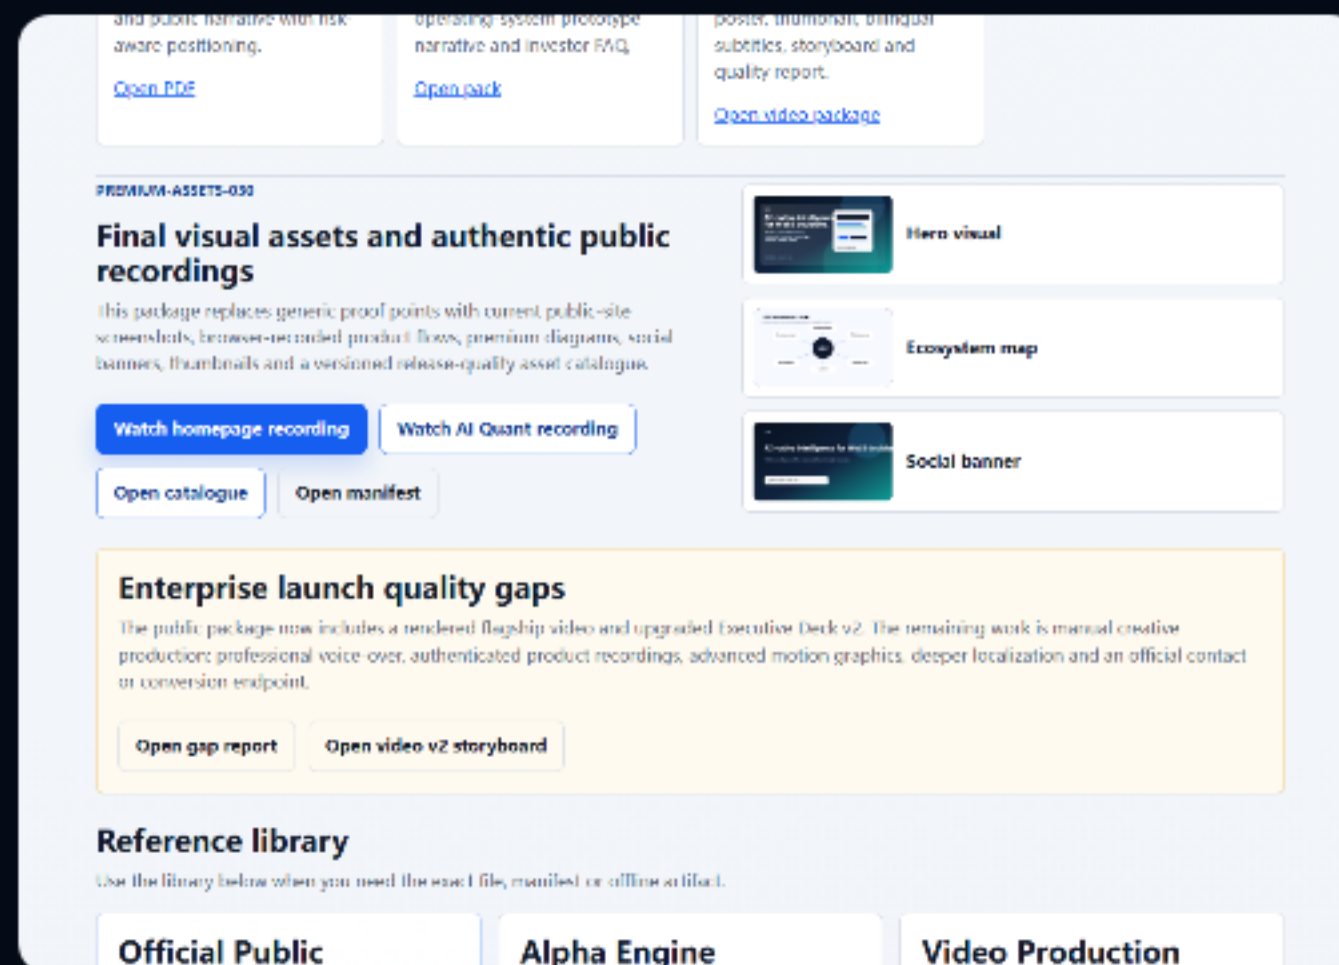

Planned work stays in the roadmap lane until it is ready.

How should a customer compare L3AI to ordinary content sites?

L3AI combines product pages, product visuals, narrative assets, QA evidence, manifests and trust language into one controlled public review experience.

Product answer

The proof is not one document. It is the connected package.

Which audience gets which path?

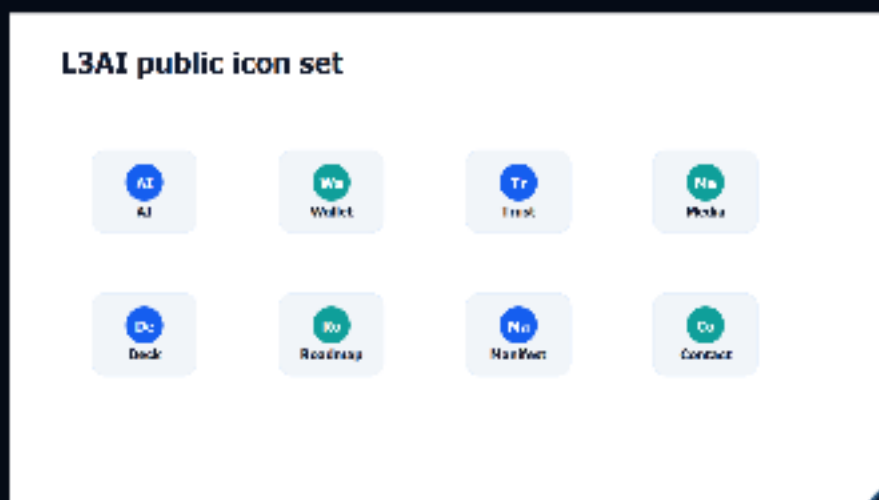

Users start with Overview and AI Quant. Partners start with Business Model and Contact. Media reviewers start with Resources. Operators start with manifests and QA evidence.

AI Quant

Compute

Wallet

Product answer

The same platform supports different review paths without changing the truth.

What should never appear in the public product book?

No private repository detail, no API keys, no tunnel state, no real user data, no signing material, no deposit instructions, no unsupported financial claims and no internal task labels.

Product answer

Public product material must stay safe enough to share.
