

A user can review L3AI without needing a pitch

Product book for customers and evaluators who want to understand what exists now, what is in progress and what is planned.

What this book does

Prospective user product guide. Show the live public surfaces, user lifecycle and capability map.

Current / In Progress / Planned kept separate

The product starts at the public homepage.

L3AI opens with product proof, visual rhythm, trust boundaries and direct routes into deeper pages.

- 1 First 30 seconds**
Visitors understand the category and next step.
- 2 Proof before files**
Screens and recordings sit before downloads.
- 3 No hidden dependency**
The public site can stand alone.

AI Quant is explain-first.

The workflow helps structure Web3 context and limitations for review without claiming certainty.

- 1 What happened**
Structure market or product context.
- 2 Why it matters**
Explain relevance in accessible language.
- 3 What to review**
Point to next proof or boundary.

PRODUCT MODULES

What this page helps the visitor understand.

Input

Public market themes, protocol context, product documentation and launch materials.

Model role

Explain, compare, summarize and structure rather than guarantee performance.

Reviewer controls

Risk notes, scenario language, public FAQ and unsupported-claim filters.

Output

Educational context that can hand off to product pages, whitepaper or deck.

WALKTHROUGH

From first context to next step.

01 Collect public context

Gather public-facing information only.

02 Structure signals

Separate observation, assumption, scenario and uncertainty.

03 Review boundary

Remove advice, guaranteed outcome and live-execution language.

04 Hand off

Route visitors to business model, roadmap or contact when appropriate.

The workflow helps structure Web3 context and limitations for review without claiming certainty.

Wallet-aware pages support safer review.

The journey can reference wallet context as education while keeping private signing and account data out of public material.

- 1 Context**
Wallet moments are explained.
- 2 Boundary**
No signing demonstration in public assets.
- 3 Review**
Users can move back to resources.

The journey can reference wallet context as education while keeping private signing and account data out of public material.

The business model page explains why trust matters.

L3AI connects audience, product experience, education, resources and qualified handoff into one loop.

- 1

Audience
People arrive with curiosity or uncertainty.
- 2

Experience
The product helps structure review.
- 3

Handoff
Qualified conversations move to contact.

Resources turn product claims into reviewable evidence.

A user can open decks, whitepapers, videos, screenshots, recordings and manifest files without asking for private access.

- 1 **Decks**
Editable and PDF versions.
- 2 **Videos**
Public-safe product and launch story.
- 3 **Manifests**
Versioned asset references.

A user can open decks, whitepapers, videos, screenshots, recordings and manifest files without asking for private access.

The user lifecycle is simple.

A visitor moves from curiosity to informed review before any deeper conversation.

A visitor moves from curiosity to informed review before any deeper conversation.

AI Quant workflow

Explains the model's decision-making process, not personal data, to build trust.

L3AI is a public intelligence and education layer.

Audience / Capability	Question / Function	Route / Status
Market context	Explain signals	Current
Product guidance	Route visitors	Current
Wallet education	Reduce confusion	Current
Release resources	Support review	Current
Campaign automation	Scale content operations	Planned

What users can review now.

The current public package is intentionally centered on visible, reviewable surfaces.

Contact path

In progress

What is being polished next.

These are production-quality improvements, not required proof of the current product.

Creative polish

Higher-end motion design, voice-over and campaign layouts.

Localization

More market-specific landing paths and review copy.

Evidence cadence

More screenshots, recordings and QA manifests as the site evolves.

These are production-quality improvements, not required proof of the current product.

What remains planned.

Planned capabilities are described as future direction and require separate approval before launch claims.

Growth automation

Campaign orchestration and content refresh systems.

Partner workspaces

More partner-specific review rooms and co-marketing packages.

Deeper analytics

Public reporting surfaces and campaign learning loops.

Planned capabilities are described as future direction and require separate approval before launch claims.

The product book keeps the public boundary intact.

Every surface is written for public review.

No secrets

No credentials, keys, tunnel state or protected local paths.

No private data

No real balances, signing material or user account details.

No unsupported promises

No performance, yield-rate, listing-status or outcome-certainty claims.

Every surface is written for public review.

A prospective user can verify the product in minutes.

Open homepage	Understand value proposition	Current
Open AI Quant	Review explain-first workflow	Current
Open Wallet	Review safety language	Current
Open Resources	Download proof assets	Current
Open Contact	Route qualified questions	Current

The same public layer supports several roles.

The product experience can be adapted without changing the core trust model.

Customers

Understand the product before deeper engagement.

Partners

Assess ecosystem fit and co-marketing potential.

Media reviewers

Use approved, versioned facts and visuals.

The product experience can be adapted without changing the core trust model.

Close

Review the product before reviewing the pitch.

The public product path is the first proof point. The deck and whitepaper should reinforce what visitors can already see.
