

L3AI turns Web3 review into a guided product journey.

A visual-first public story for first-time customers, media, partners and investor-style reviewers.

Customer takeaway

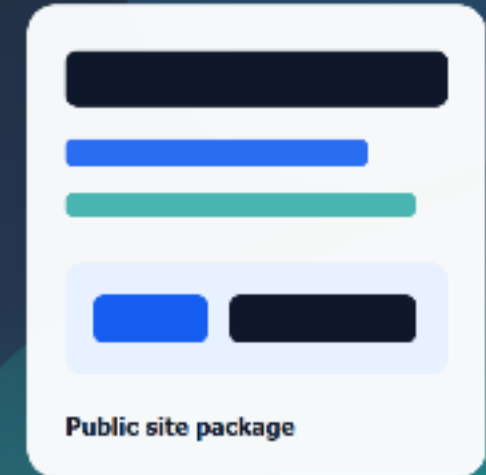

Start with confidence, not noise.

L3AI

AI-native intelligence layer for Web3 decisions.

Product-led public journey
Authentic browser recordings
Verified launch assets

PREMIUM-ASSETS-030

Story Book Premium v2

Users meet signals before they have a safe way to evaluate them.

The first problem is not access to information. It is the missing path from market context to product understanding, wallet-aware education and reviewable proof.

The first problem is not access to information. It is the missing path from market context to product understanding, wallet-aware education and reviewable proof.

boundary

L3AI

AI-native intelligence for Web3 decisions

Public recordings, verified assets and launch-ready resources.

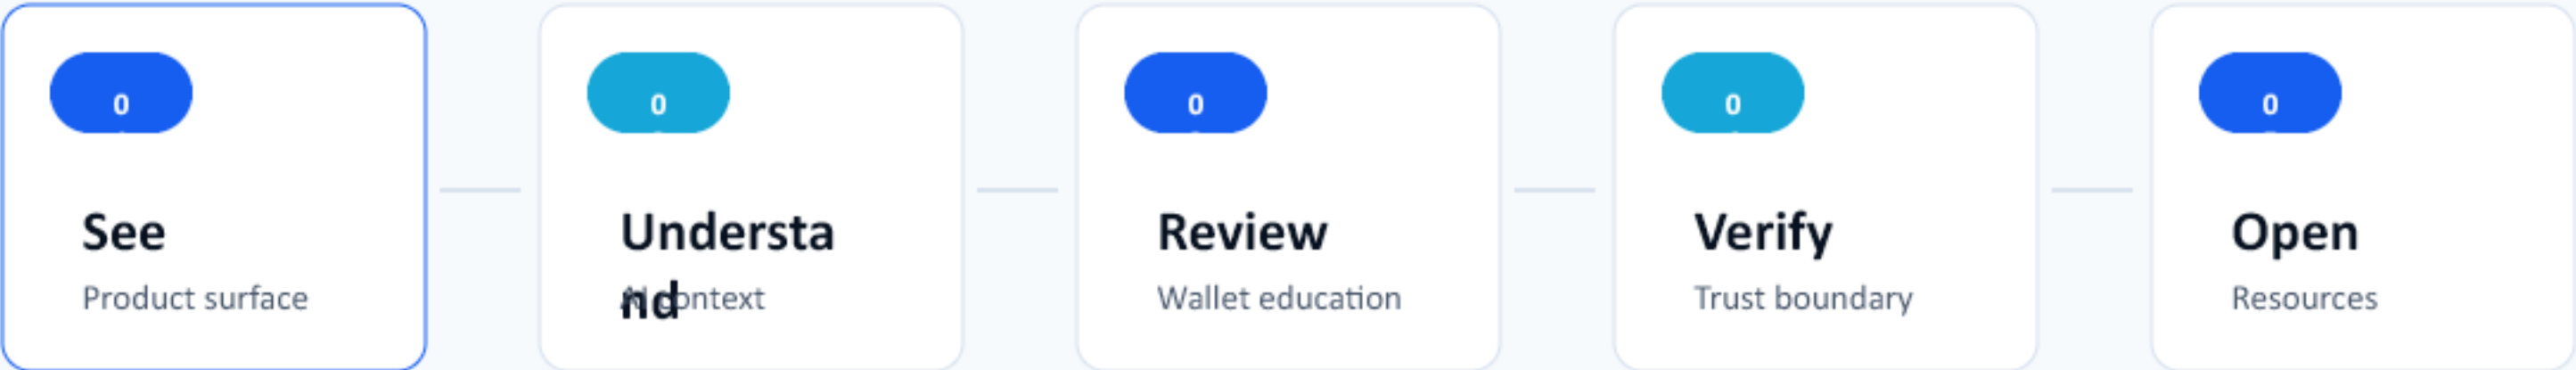

xiaohongshu0215-afk.github.io/l3ai-public-site

Customer takeaway

L3AI gives the first visit a clear sequence.

A visitor should always know where they are in the story.

The public experience is intentionally ordered: see the product, understand the context, review wallet education, check the boundary, then open proof.

Customer takeaway

Every page answers one customer question.

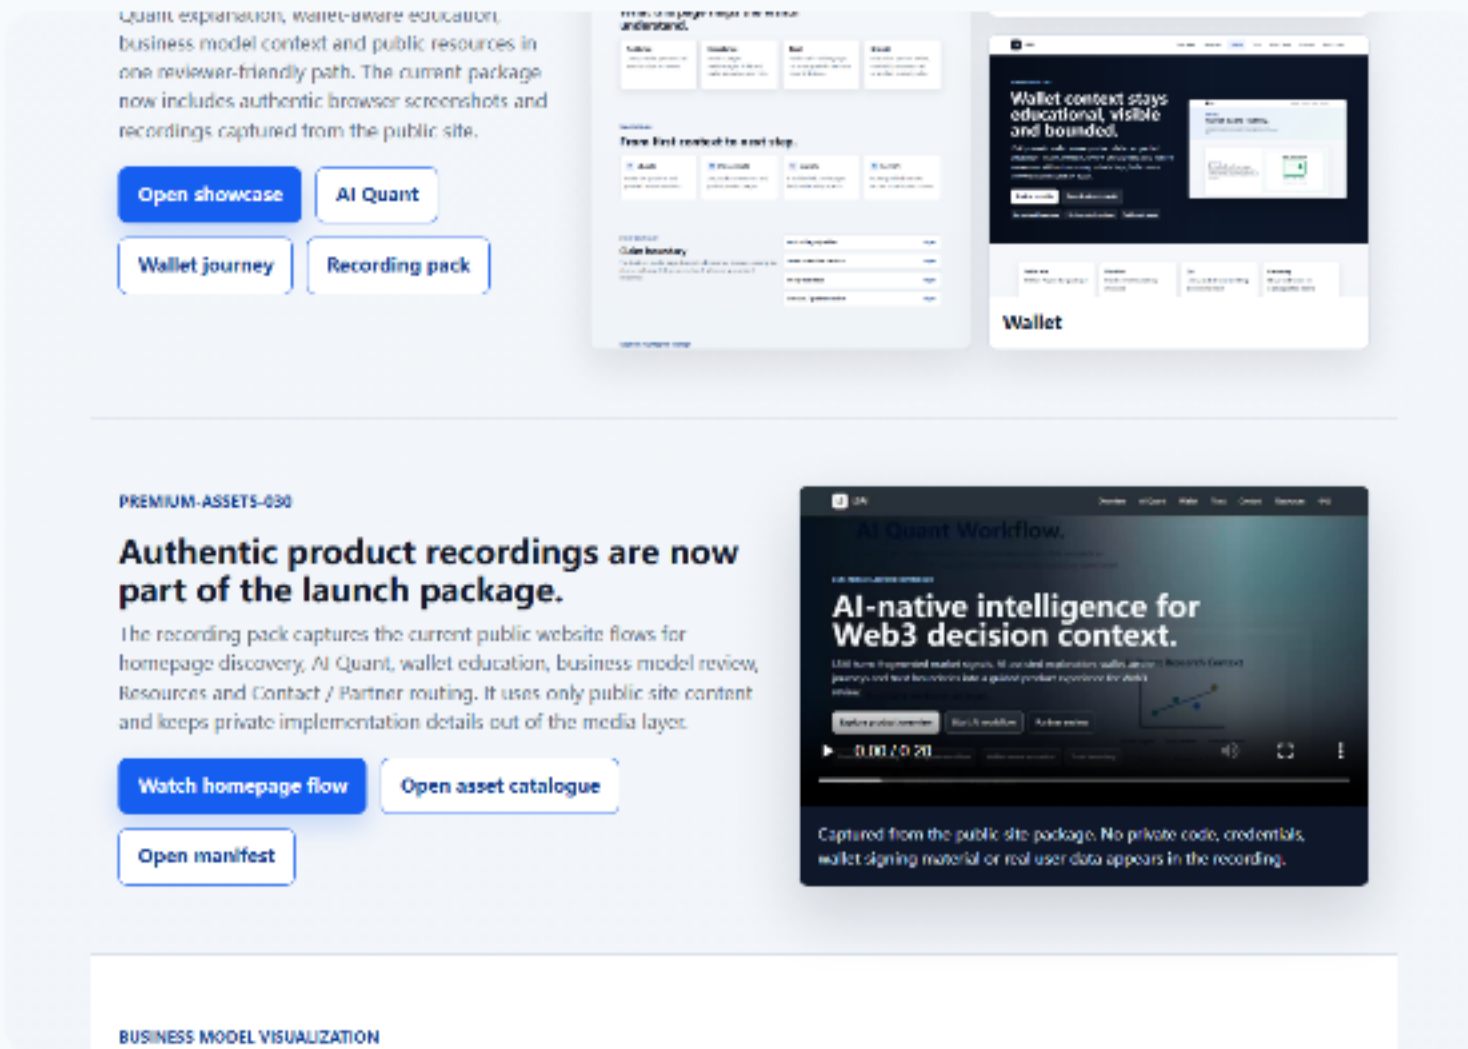

The homepage has to prove the company before the deck does.

The public homepage now acts as a story room. It shows the product surface, routes visitors by intent and points them to controlled collateral.

The public homepage now acts as a story room. It shows the product surface, routes visitors by intent and points them to controlled collateral.

Customer takeaway

A mature brand makes the next step obvious.

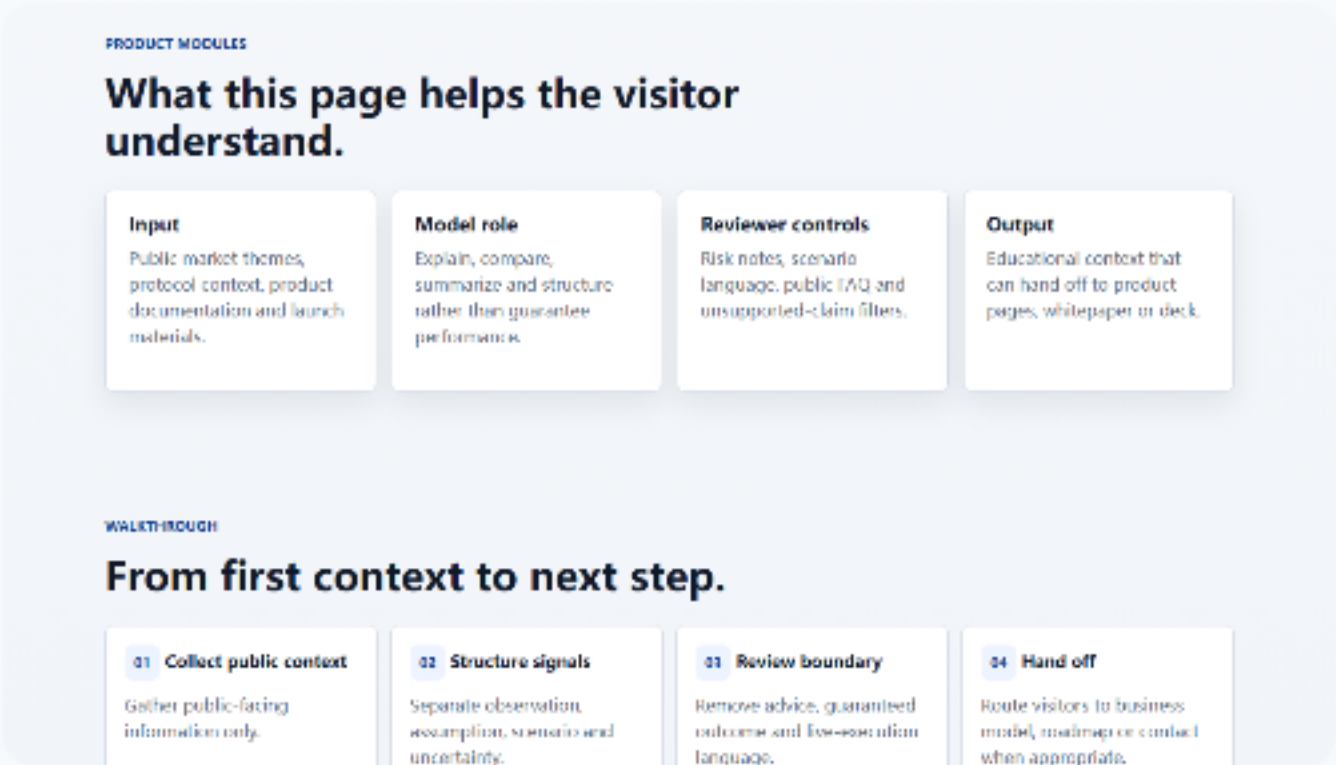

AI Quant explains the signal before a user forms a conclusion.

The workflow is explain-first. It organizes market context, visible limitations and user review steps without promising performance or automating financial decisions.

The workflow is explain-first. It organizes market context, visible limitations and user review steps without promising performance or automating financial decisions.

Customer takeaway

The product helps users review context, not chase certainty.

AI Quant workflow
Explain-first flow: no context, not personal and no investment advice.

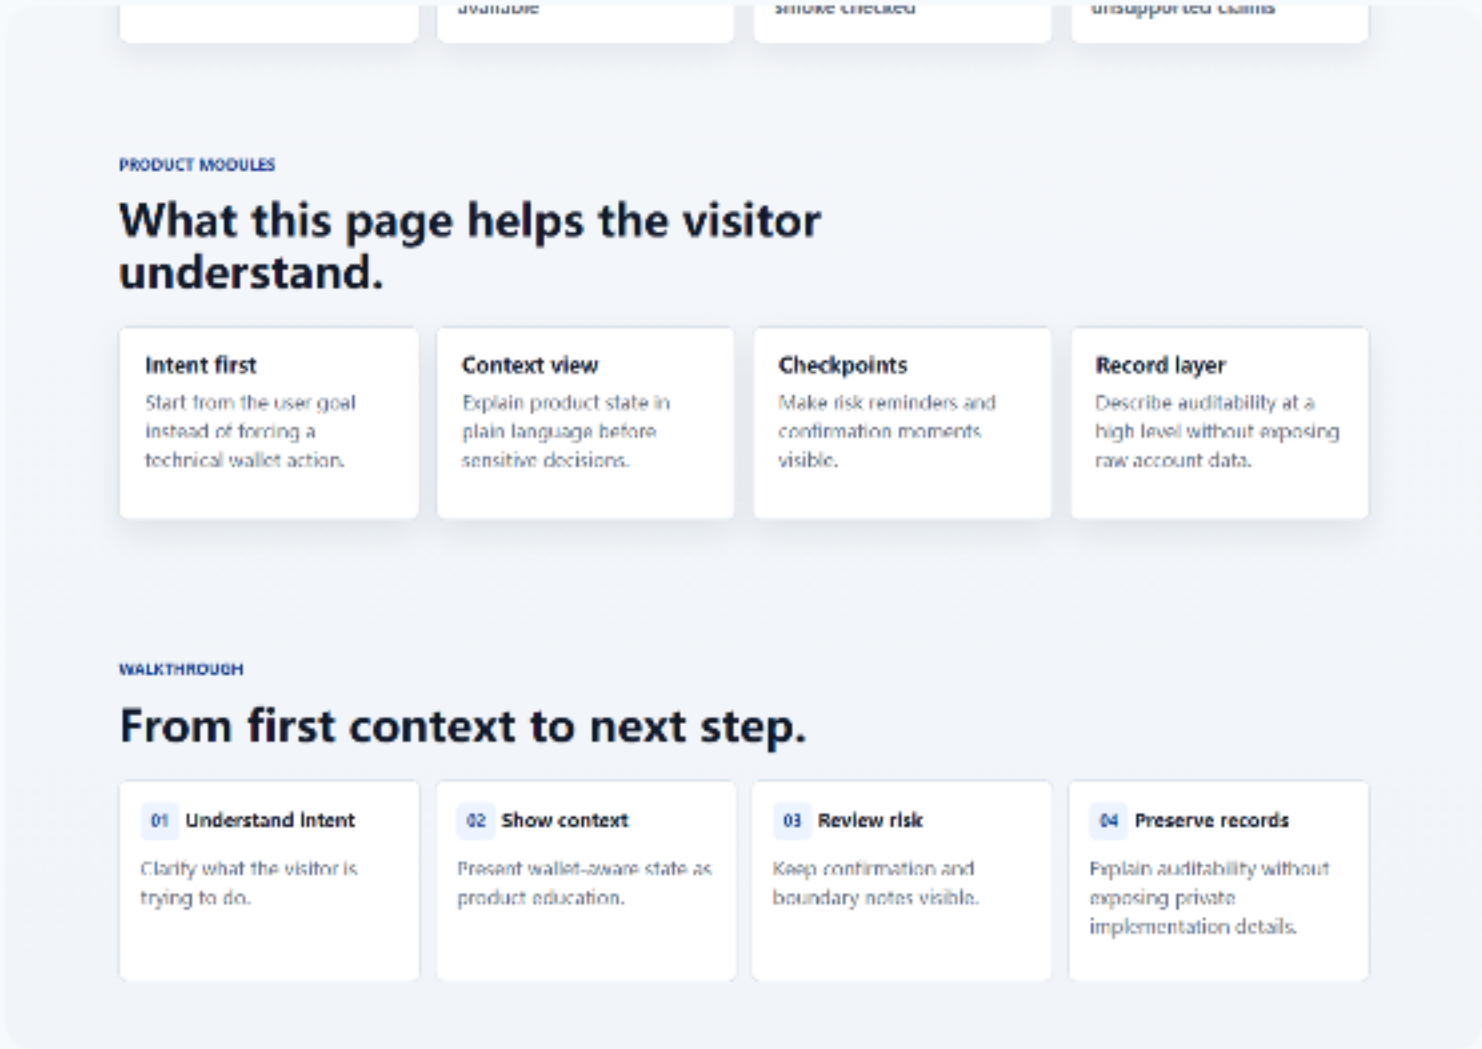

Wallet moments become checkpoints instead of pressure points.

L3AI can frame wallet-aware journeys while keeping signing material, credentials and real account data out of public collateral.

L3AI can frame wallet-aware journeys while keeping signing material, credentials and real account data out of public collateral.

Customer takeaway

Education comes before action.

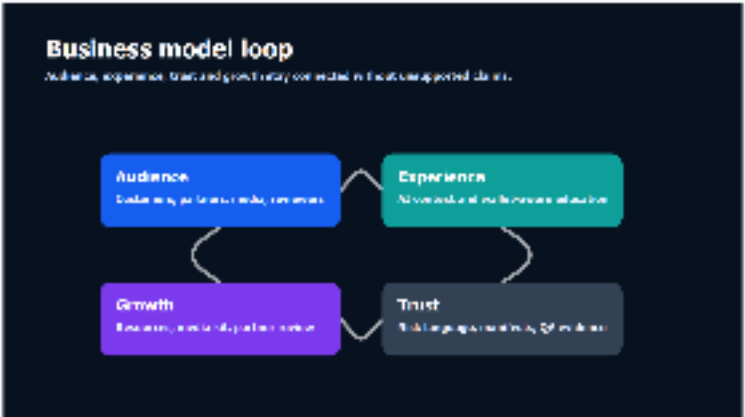

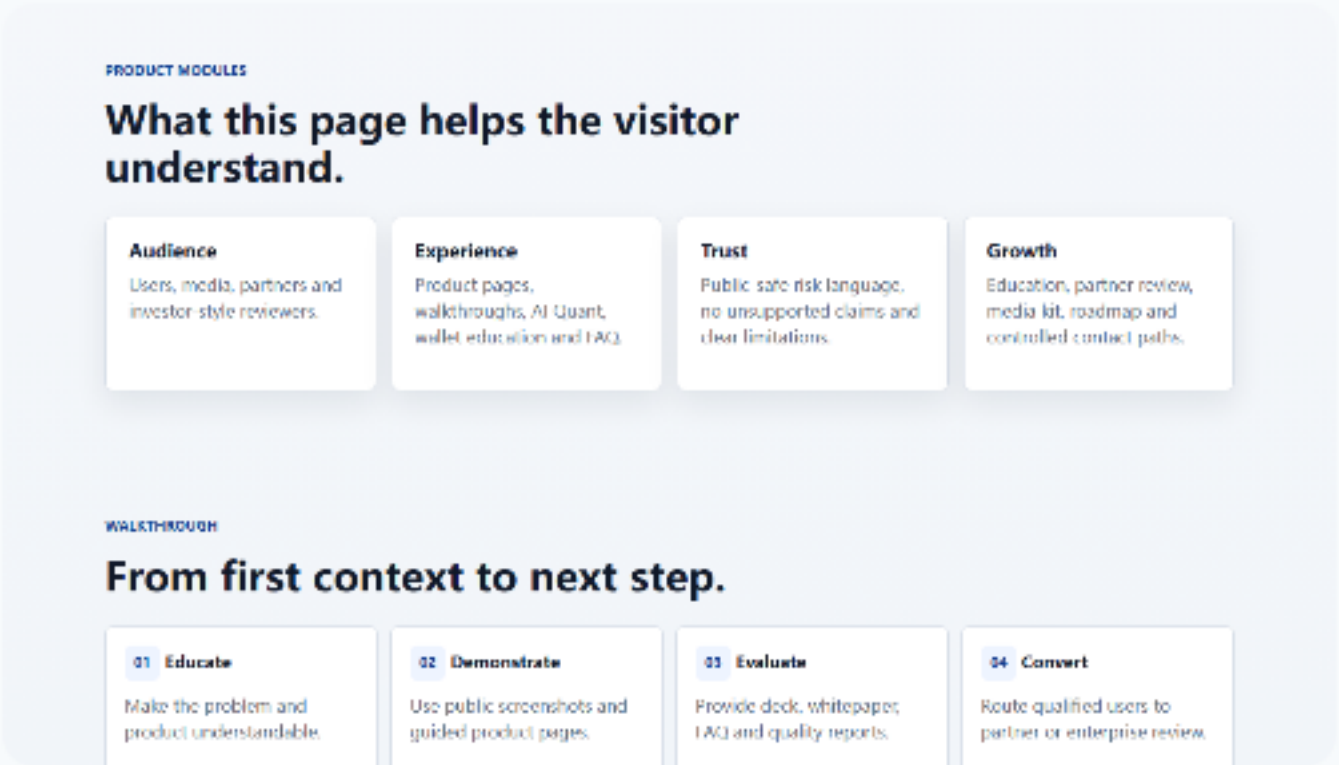

The business grows when visitors can verify the story.

Attention becomes understanding. Understanding creates trust. Trust improves the quality of customer, partner and media conversations.

Attention becomes understanding. Understanding creates trust. Trust improves the quality of customer, partner and media conversations.

Customer takeaway

The commercial loop starts with clarity.

L3AI connects public education, product proof and partner review.

Customers, partners, media and investor-style reviewers need different paths, but the same controlled source of truth.

L3AI ecosystem map

Product, content, trust and launch operations in one public surface.

Roadmap status

Customer takeaway

One story, several review paths.

Every claim sits in a visible status lane.

Current, in-progress and planned capabilities are separated so public materials stay credible.

Channel expansion

The strongest public story says what it will not do.

The rebuilt Story Book avoids private implementation details, protected data, outcome promises, deposit prompts and unsupported financial claims.

No outcome promises

No performance, yield-rate or asset-price promises.

No deposit prompts

No instruction to fund, trade or sign from public collateral.

No private exposure

No protected routes, credentials, signing data or internal source detail.

Status lanes remain visible

Current, in-progress and planned work are kept separate.

Customer takeaway

Clear boundaries make the brand safer to share.

Resources turn the story into downloadable evidence.

Visitors can move from the story to the product book, partnership deck, video narrative, screenshots, recordings and versioned manifests.

Enterprise launch quality gaps
The public package now includes a rendered flagship video and upgraded Executive Deck v2. The remaining work is manual creative production: professional voice over, authenticated product recordings, advanced motion graphics, deeper localization and an official contact or conversion endpoint.
